Correction: Invasion inhibition in pancreatic cancer using the oral iron chelating agent deferasirox

Shogo Amano1, Seiji Kaino1, Shuhei Shinoda1, Hirofumi Harima1, Toshihiko Matsumoto2, Koichi Fujisawa1, Taro Takami1*, Naoki Yamamoto1, Takahiro Yamasaki2 and Isao Sakaida1

Following publication of the original article [1], the authors have identified an error, specifically the overlapping of the two images in Fig. 2a (24 h, DFX 10 μm and DFX 100 μM), which was pointed out to us by the editorial team. The corrected Fig. 2 is given in this correction article.

Fig. 2 Effect of DFX on migratory ability of pancreatic cancer cells. Pancreatic cancer cell lines (BxPC-3, Panc-1, HPAFII) were treated with DFX (0, 10, 50, 100 μM) and incubated for 24 h. a–c Migrated cells were visualized via phase-contrast microscopy. d–f % wound closure was measured and the ratio to wound width at the start of the incubation was used as an index of cell migration, compared to control group (n = 3 each). Data are presented as mean ± SD. *P < 0.01 vs control.
